Topic: Tips and tricks to reduce your energy costs

Dear Sir, Dear Madam,

The cost of energy is a subject at the heart of current matter, especially with the arrival of the winter heating season.

We would like to give you some recommendations that will allow you to minimize the impact of this increase on your expenses and, at the same time, to support the protection of the environment. Indeed, small changes sometimes lead to big results!

Therefore, we invite you to adopt simple actions on a daily basis that will allow you to lower the CO2 emissions linked to your home and, thus, to limit your expenses as well.

A "tips and tricks" flyer is attached to this letter. For example, lowering the heating in homes by 1 degree allows a gain in energy consumption of 7%.

The good news is that we can all act!

Best regards,

Cogestim SA
